Summary

Software Engineer with expertise in AI, data science, and architecting scalable backend systems. Proven ability to deploy Retrieval-Augmented Generation (RAG) models, streamline CI/CD pipelines, and automate complex workflows. Currently pursuing an M.S. in Computer Science, driven to tackle complex data challenges and build innovative, high-impact applications.

Education

Georgia State University

M.S. in Computer Science; GPA: 4.10

Jan 2026 – Present

Atlanta, GA, USA

Vellore Institute of Technology

B.Tech in Computer Science Engineering; CGPA: 8.77

Jul 2018 – Apr 2022

Vellore, India

Experience

MAGNUS Consulting

Software Engineer

Feb 2025 – Oct 2025

Kathmandu, Nepal

- Spearheaded development of a secure internal document management application, integrating SonarQube, OAuth 2.0/Google Sign-In, and relational databases, improving document accessibility and operational efficiency by 30%.

Intralinks

Associate Software Engineer

Jun 2022 – Nov 2024

Hyderabad, India

- Architected scalable backend infrastructure using Django, FastAPI, PostgreSQL, and Redis, successfully increasing system throughput and reducing API latency by 40%.
- Developed event-driven components and asynchronous listeners for a real-time tracking application, optimizing system responsiveness and accelerating feature iteration cycles by 25%.
- Deployed AI-driven Python applications to automate complex data workflows, reducing manual processing time by over 50% while significantly enhancing operational consistency.
- Earned the "Invaluable Member" award for spearheading the end-to-end development of LLM-based RAG pipelines, which drastically improved contextual search accuracy and automated knowledge retrieval.
- Collaborated with cross-functional data science and product teams to integrate generative AI components into production environments, accelerating the time-to-market for new intelligent features.

Intralinks

Software Engineer Intern

Feb 2022 – Jun 2022

Hyderabad, India

- Engineered full-stack MERN prototypes and an automated translation service as an R&D Intern, streamlining team workflows and securing stakeholder approval to lay the groundwork for platform internationalization.

Technical Skills

Programming Languages: Python, Java, JavaScript (Node.js), C++, SQL, Bash

Frameworks & Tools: Django, FastAPI, Flask, Spring Boot, MERN Stack, Docker, Kubernetes (Helm), Git, Nginx, Streamlit

Machine Learning & AI: PyTorch, TensorFlow, LangChain, RAG Pipelines, BERT, OpenCV, Vector DBs (FAISS, Chroma, PGVector)

Databases & Data Science: PostgreSQL, MongoDB, Redis, Pandas, NumPy, Matplotlib, Seaborn

Projects & Publications

Directed Energy Deposition via AI Enabled Approaches | *Complexity Journal*

India

- Co-authored a Ministry of Defense research paper applying machine learning to additive manufacturing, leading to enhanced predictive modeling for material deposition and optimizing manufacturing protocols.

Booking Synchronization Engine | *Python, Streamlit*

- Developed a dynamic Streamlit web app generating simulated .ics iCalendar files, accelerating the QA testing process for complex reservation workflows and reducing manual setup time.

Computer Vision & Sequence Modeling | *NumPy, SciPy, BERT*

- Applied 2D FFT spectral analysis and generated BERT vector embeddings for advanced sequence prediction, improving text classification accuracy and robustness in natural language processing tasks.

Certifications

Deep Learning, COVID19 Data Analysis Using Python, Using Python to Access Web Data, Data Collection and Processing with Python (Coursera);

Physical Science Responsible Conduct of Research (CITI)
